1. C
2. B,C
3. C
4. C
5. C
6. C
7. C
8. B
9. B
10. A
11. **Join:**

A JOIN clause is used to combine rows from two or more tables, based on a related column between them.

12.Types of Joins:

- a.Left Join
- b.Right Join
- c.Inner Join
- d.Outer Join

13. SQL Server is a relational database management system, or RDBMS, developed and marketed by Microsoft. SQL Server is built on top of SQL, a standard programming language for interacting with the relational databases.

14. The PRIMARY KEY constraint uniquely identifies each record in a table.

Primary keys must contain UNIQUE values, and cannot contain NULL values.

A table can have only ONE primary key; and in the table, this primary key can consist of single or multiple columns (fields).

15. ETL stands for Extract, Transform and Load, which is a process used to collect data from various sources, transform the data depending on business rules/needs and load the data into a destination database.
